Conquest web server

The Conquest DICOM server can be turned into a web server and can be viewed using a browser application viewer.

This procedure assumes the following environment:

Installation environment > Apache and PHP must be installed and "XAMPP" is installed

AETitle > PacsDicom

IPAddress > 192.168.100.56

PortNo > 104

1. Overwrite copy of "cgi-bin" and "htdocs" folders

[Original] > [Conquestパス]webserver¥cgi-bin

[Original] > [Conquestパス]webserver¥htdocs

[Copy to] > C:\(\text{xampp}\)

A folder already exists at the copy destination, but it is overwritten and copied regardless.

2. Set the DICOM server port number "104" in the config.php file.

file	Setting change line	Details of setting changes	
C:¥xampp¥htdocs¥api¥dicom¥config.php	2	\$exe = 'servertask -p104 -p127.0.0.1';
